About us

We’re transforming the way businesses engage with environmental sustainability, by making our services simple, accessible and affordable. We believe in doing the right thing by the planet, and are proud to play our part in the global effort to save it.

Sumillion have worked with Positive Planet and manufacturers to establish a standard **Estimated Emissions (kgCO2e)** value for almost all of an organisations IT infrastructure.

We believe you cannot choose between economic growth and sustainability and aim to show the whole industry that we can do both.

Proud to be a member of the following organisations acting to reduce carbon emissions

Why Sumillion & Positive Planet?

Measuring, reducing and offsetting your company carbon emissions can be difficult and time consuming.

Sumillion have streamlined this process by calculating the impact of hardware at the time of procurement. Whether you're buying 1 or 1000 laptops or a new server; You can be sure the environmental impact has been addressed at the beginning of its lifespan rather dealing with it retrospectively.

Positive Planet Climate Impact Fund

Mitigate Your Emissions With Carbon Offsetting
We purchase from a selection of approximately 45 United Nations Certified carbon reduction projects in 25 developing countries to offset 1 tonne of carbon emissions.

Online Dashboard to Share Your Impact
Track and share your positive actions with your online dashboard. Communicate carbon offset, trees planted and plastic removed to key stakeholders.

Remove Carbon With Tree Planting
For every tonne of carbon you offset you also plant 10 trees which will remove approximately 1 tonne of CO2e over a ten year period.

Blockchain Tracked Assurance
So that you can be certain of the authenticity of your carbon offsets, all your purchases are logged using blockchain technology for total transparency.

Clean Up The Oceans
Removing plastics from the oceans has a major impact on our environment. Your plan will also help to clean up 100 items of plastic for every 1 tonne of carbon offset.

Delivering Maximum Benefit
Our Climate Impact fund represents the best value solution for organisations looking to mitigate their carbon emissions.

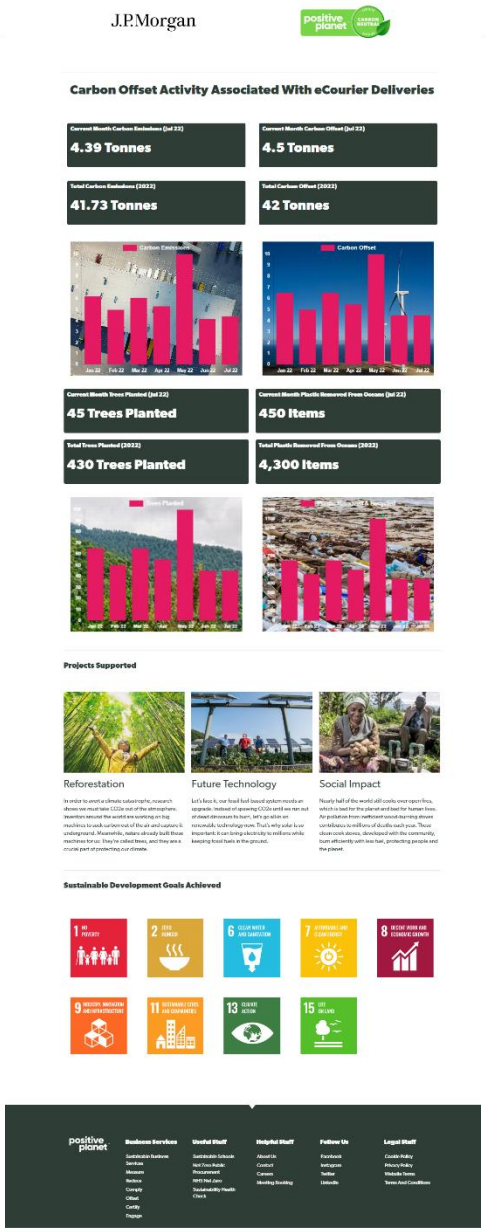
Process

Get A Quote
If you are keen to offset the environmental impact of your IT Hardware, ask us for a no obligation quotation, or we can calculate the impact at time of procurement shown on the invoice.

What You Want to Offset
We'll calculate amount of carbon you need to offset. Working with manufacturers, our experts calculate the amount of KgCO2e for almost any piece of IT Hardware.

Track Your Progress
When you make a purchase we issue a certificate showing the environmental benefit and add the information to your company dashboard so you can keep track of your impact.

Online Dashboard

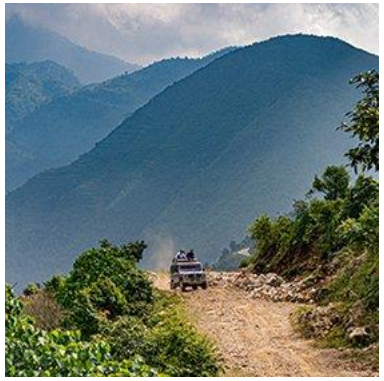


Our custom online dashboards are a great way to track and share your emissions and your mitigating actions. We record carbon offsets purchased, trees planted and plastic removed.

Carbon Offset Projects

We offer a range of up to 45 projects across 25 countries. All are UN Certified and typically meet between 7 - 9 Sustainable Development Goals.

Tree Planting



Reforestation and conservation are critical components in the fight against climate change. In collaboration with our tree planting partner Eden Projects, we help to reduce extreme poverty and restore healthy forests. We achieve this by employing local people across eight different countries to plant millions of trees every year.

Plastic Clean Up

Every year, millions of tons of plastic enter the oceans, of which the majority spills out from rivers. A portion of this plastic travels to ocean garbage patches, getting caught in a vortex of circulating currents. If no action is taken, the plastic will increasingly impact our ecosystems, health, and economies. By paying to remove 100 items of per tonne of carbon offset you play a vital part in protecting the earths oceans and vital ecology.
